Subject: Settlement opinion

   " settlement forces Microsoft to donate software, hardware, and services to
   America's poorest schools. Red Hat responded to the proposed settlement,
   pointing out that the settlement could simply introduce Microsoft to a market
   where they could further extend their monopoly. "

My opinion is simple: Open Source Software is the answer for any school.

               Linux is the solution for all schools.
               Microsoft is OK for business world only.
